Features Benefits

- PLASCON® waste destruction plants eliminate a wide variety of concentrated organic waste types such as PCBs, pesticides, ozone depleting substances such as CFCs, HCFCs, as well as other green house gases, refrigerants and halons.
- Waste treatment can be either in-process or from a stockpiled feedstock, with a throughput of up to 3 tonnes of waste per day.
- PLASCON® uses plasma technology , not high temperature incineration, in order to ensure clean , safe, waste destruction.
- Destruction efficiencies can exceed 99.9999%.
- Extremely safe, computer monitored operation, requiring minimal plant supervision. Can be remotely monitored.
- Emissions to the atmosphere are substantially lower than international standards , and no toxic residues are generated.
- Low capital cost and competitive operating costs relative to comparable waste treatment technologies for the disposal of organic waste types.
- Worldwide supply, installation and ongoing support services provided.
